

S

## Introduction

- ✓ Do you need to track which applications you have installed in your PC?
- ✓ Do you want to know of any installations or changes (solicited or unsolicited) to your PC
- ✓ Do you want to be informed (on real time) of the changes (deleted, changed or new) that are happening?
- ✓ Do you want to keep track changes in your PC?
- ✓ Do you want to perform simple PC software asset management without lifting a finger?
- ✓ Do you need the proper information for you to perform diagnostic on installations?

PCLogger © may be able to give you the information that you require with the least minimum effort – just run it!

f

## Features

- Can track most significant changes on your PC
- Virtually non intrusive (sits in the system tray)
- Audible (but non annoying) alarm
- Silence audible alarm for 1 hour
- Visible alarm that requires acknowledgement
- Saves records to csv file (for registered version)
- No configuration required.
- Runs on Windows NT 4, Windows 2000, Windows XP
- Can easily install as auto start
- Win32 compliant – no undocumented features used
- Written in C++ to be fast and robust
- Well behaved multi-threaded application

t

## Quick Start

T

1. Unzip pclogger.zip to any directory e.g. c:\winnt\system32.
2. Go to the directory that you have unzipped the files and double click on PcLog.exe
3. Once PCLog.exe is started, it will sit itself in the system tray.  
That is it! No further configuration is required. PCLogger will start to monitor your application activities.
4. To bring PCLogger to foreground, right mouse click on the icon.
5. To hide PCLogger, click on the minimise button.
6. When a change is detected, a continuous audible alarm will be heard and the icon will flash.
7. To acknowledge an alarm, click on the Acknowledge button.
8. To silence an alarm for 1 hour, click on the options button and select the Silence checkbox.
